

Environmental Guidelines of Gustav Klauke GmbH

The environmental guidelines provide clear and uniform directions for implementing the environmental protection objectives in all Klauke corporate divisions.

Objectives

Through our responsibility for the sustained preservation of our environment for both the present and for succeeding generations, we are committed to dealing with natural resources in a responsible and efficient manner.

Security for people and the environment

Our facilities are of the latest, economically justifiable state of the art, to ensure the highest level of security in protecting the employees and the environment.

Regular internal and external controls and maintenance procedures back up our high security claims.

Protecting resources

In development, engineering and production as well as in many other areas, we work economically with resources in short supply, such as energy, water and raw materials. The avoidance, reduction and/or recycling of waste materials has priority over removal.

Product responsibility

We continue to bear responsibility for our products, even after sale. The purposeful development of long-lasting products and their capacity to be recycled are at the very core of our environmental protection measures, when it comes to future European regulations as well.

Responsibility of employees

All Klauke employees share in the responsibility for implementing our environmental protection measures. Awareness of the environment must continue to be developed systematically.

Legal guidelines

In accordance with the guidelines of our parent company, Textron, we comply strictly with all prevailing laws, regulations and norms as minimum standards. We also stay involved in the latest legal developments, which enables us in many areas to meet future legal requirements already at this stage.

Open information policy

Klauke maintains an open information policy both internally and externally, so that employees, customers, the public and public authorities can be properly informed of our activities in environmental protection. We thereby attach great value to maintaining an objective, open and comprehensive dialog.
